# SPEIRS MAJOR

Our lighting design creates a strong after dark identity and enhances the experience of the transition from building to building, through an apparently effortless, yet technically challenging, reveal of its twisting geometries.

Smith

# SPEIRS MAJOR

The design for the CF Toronto Eaton Centre Bridge is a unique response to the contrasting architectural language of the two buildings it links.

# SPEIRS MAJOR

# SPEIRS MAJOR

Carefully integrated lighting in the bridge deck picks up the edges of the vertical bronze cladding panels that fan out from the Hudson's Bay heritage building entrance. The sense of rotation is further enhanced by light that picks up the profile edges of the twisting fins.

The exterior overhanging the sidewalk is a backlit soffit, illuminated specifically to contribute to a positive experience for pedestrians passing under the bridge at street level.
